

Fluke BP120MH

Overview

Battery pack as replacement battery in the Fluke 120 series ScopeMeters and in the Fluke 43 and 43B Power Quality Analyzers. The BP120MH is a Nickel-Metal-Hydride Battery Pack, made specifically to support the ScopeMeters and Power Quality Analyzers mentioned.

Features

- The battery capacity is 3000 mAh, this is 50% more than that of the original BP120. As a result, the instrument-user will benefit from a much longer 'up time' than with the original NiCd battery, at the same volume and weight.

The BP120MH is more environmental-friendly than the NiCd battery used before, as it contains no heavy metals. Just as before, the battery pack can be charged while installed in the instrument, using the [PM8907](#) power adapter/charger.

The BP120MH replaces the earlier models BP120 and BP130 alike.
